

Dial-Gate Softswitch

Innovative Class 4/5 VoIP Softswitch

Our innovative web-based Softswitch and billing server for the VoIP and PSTN networks offers advanced real-time monitoring, pre- & post-paid billing, automatic invoice scheduling & call-plan subscriptions.

VoIP Softswitch

Manage your customers with ease.

Telecommunications
Service providers can harness Dial-Gate softswitch to deliver a wide range of competitive VoIP services like residential, mobile and wholesale.

Low start-up costs and a broad set of features make Dial-Gate the ideal solution for small- & mid-sized VoIP providers delivering phone services to clients.

Dial Gate is an innovative web-based softswitch and billing server for the IP & PSTN networks. Once installed on a server, it functions as a VoIP softswitch by connecting calls from one phone line to another within the same or different networks. In addition, it offers advanced real-time monitoring, pre- & post-paid billing, and automated invoice scheduling & call-plan subscriptions.

Dial Gate's expanding line of service options place providers in a favorable position to generate a quick ROI, notably due to its low start-up costs.

Standalone Billing System

Automate your business processes.

Dial-Gate's rich monitoring & reporting features reduce the management burden & enhance oversight for providers. The platform features exportable call data records & account logs.

Dial-Gate comes with an integrated billing platform that allows service providers to easily create & manage a range of service bundles for customers.

Dial-Gate's billing system includes automated invoicing and multiple payment options including pre- & post-paid. In addition, the Dial-Gate platform is designed to enhance the ability of service providers to manage their reseller & agent networks. Designated partners can access their accounts via Dial-Gate's user-friendly web interface.

Owing to Dialexia's long-established partnerships with the telecom industry's leading hardware manufacturers, app developers, service providers and emergency operators, Dial-Gate easily integrates with existing legacy TDM & IP networks. Its comprehensive design and technology allow it to support NAT/Firewall, failover & high-availability environments.
